## DEVICES FOR BI-DIRECTION APPLICATIONS

For bi-directional devices use CA suffix (e.g. SM15T12CA). Electrical characteristics apply in both directions.

## APPLICATION NOTES

A 1500 W (SMC) device is normally selected when the threat of transients is from lightning induced transients, conducted via external leads or I/O lines. It is also used to protect against switching transients induced by large coils or industrial motors. Source impedance at component level in a system is usually high enough to limit the current within the peak pulse current ( $I_{PP}$ ) rating of this series. In an overstress condition, the failure mode is a short circuit.

**Notes**

- (1) For bi-directional devices add suffix "CA" instead of "A"  
 (2)  $V_{BR}$  measured after  $I_T$  applied for 300  $\mu\text{s}$  square wave pulse  
 (3) For bi-polar devices with  $V_{RM} = 10\text{ V}$  or under, the  $I_{RM}$  limit is doubled
