

TPS382x-xx-Q1 Voltage Monitor With Watchdog Timer

1 Features

- Qualified for Automotive Applications
- AEC-Q100 Qualified With the Following Results:
 - Device Temperature Grade 1: -40°C to 125°C
 - Device HBM ESD Classification Level 2
 - Device CDM ESD Classification Level C4B
- ESD Protection Exceeds 2000 V Per MIL-STD-883, Method 3015; Using Human Body Model ($C = 100\text{ pF}$, $R = 1500\ \Omega$)
- Power-On Reset Generator With Fixed Delay Time of 200 ms (TPS3823/4/5/8-xx-Q1) or 25 ms (TPS3820-xx-Q1)
- Manual Reset Input (TPS3820/3/5/8-xx-Q1)
- Reset Output Available in Active-Low (TPS3820/3/4/5-xx-Q1), Active-High (TPS3824/5-xx-Q1), and Open Drain (TPS3828-xx-Q1)
- Supply Voltage Supervision Range: 2.5 V, 3 V, 3.3 V, 5 V
- Watchdog Timer (TPS3820/3/4/8-xx-Q1)
- Supply Current of 15 μA (Typical)
- 5-Pin SOT-23 Package
- Temperature Range: -40°C to 125°C

2 Applications

- Automotive DSPs, Microcontrollers, or Microprocessors
- Industrial Equipment
- Programmable Controls
- Automotive Systems
- Portable and Battery-Powered Equipment
- Intelligent Instruments
- Wireless Communications Systems

Typical Application Schematic

3 Description

The TPS382x-xx-Q1 family of supervisors provide circuit initialization and timing supervision, primarily for DSP and processor-based systems. During power on, $\overline{\text{RESET}}$ asserts when the supply voltage V_{DD} becomes greater than 1.1 V. Thereafter, the supply voltage supervisor monitors V_{DD} and keeps $\overline{\text{RESET}}$ active low as long as V_{DD} remains below the threshold voltage, $V_{\text{IT-}}$. An internal timer delays the return of the output to the inactive state (high) to ensure proper system reset. The delay time, t_{d} , starts after V_{DD} has risen above the threshold voltage $V_{\text{IT-}}$. When the supply voltage drops below the threshold voltage $V_{\text{IT-}}$, the output becomes active (low) again. No external components are required. All the devices of this family have a fixed-sense threshold voltage, $V_{\text{IT-}}$, set by an internal voltage divider. The TPS382x-xx-Q1 family also offers watchdog time out options of 200 ms (TPS3820-xx-Q1) and 1.6 s (TPS3823/4/8-xx-Q1).

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TPS382x-xx-Q1	SOT-23 (5)	2.90 mm x 1.60 mm

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision B (June 2008) to Revision C	Page
• Added ESD Ratings table, Feature Description section, Device Functional Modes, Application and Implementation section, Power Supply Recommendations section, Layout section, Device and Documentation Support section, and Mechanical, Packaging, and Orderable Information section	1
• Added AEC-Q100 Qualified information and Temperature Range to Features	1
• Added -Q1 to all applicable part numbers	1
• Added FIXED DELAY TIME column to table	3

5 Device Comparison Table

DEVICE	RESET	$\overline{\text{RESET}}$	WDI	$\overline{\text{MR}}$	FIXED DELAY TIME
TPS3820-xx-Q1		Push-pull	X	X	25 ms
TPS3823-xx-Q1		Push-pull	X	X	200 ms
TPS3824-xx-Q1	Push-pull		X		200 ms
TPS3825-xx-Q1	Push-pull	Push-pull		X	200 ms
TPS3828-xx-Q1		Open-drain	X	X	200 ms

Pin Functions

NAME	PIN			I/O	DESCRIPTION
	TPS3820-xx-Q1, TPS3823-xx-Q1, TPS3828-xx-Q1	TPS3824-xx-Q1	TPS3825-xx-Q1		
GND	2	2	2	—	Ground connection
$\overline{\text{MR}}$	3	—	4	I	Manual-reset input. Pull low to force a reset. RESET remains low <u>as</u> long as $\overline{\text{MR}}$ is low and for the time-out period after MR goes high. Leave unconnected or connect to V_{DD} when unused.
RESET	—	3	3	O	Active-high reset output. Either push-pull or open-drain output stage.
$\overline{\text{RESET}}$	1	1	1	O	Active-low reset output. Either push-pull or open-drain output stage.
V_{DD}	5	5	5	I	Supply voltage. Powers the device and monitors its own voltage.
WDI	4	4	—	I	Watchdog timer input. If WDI remains high or low longer than the time-out period, then reset is triggered. The timer clears when reset is asserted or when WDI sees a rising edge or a falling edge. If unused, the WDI connection must be high impedance to prevent it from causing a reset event.

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾⁽²⁾

		MIN	MAX	UNIT
Voltage	V _{DD}	-0.3	6	V
	RESET, $\overline{\text{RESET}}$, MR, WDI	-0.3	(V _{DD} + 0.3)	
Current	Maximum low output, I _{OL}	-5	5	mA
	Maximum high output, I _{OH}	-5	5	
	Output range (V _O < 0 or V _O > V _{DD}), I _{OK}	-10	10	
Continuous total power dissipation		See Thermal Information		
Temperature	Operating free-air, T _A	-40	125	°C
	Storage, T _{stg}	-65	150	

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to GND.

7.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per AEC Q100-002 ⁽¹⁾	±2000
		Charged-device model (CDM), per AEC Q100-011	±750

- (1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

7.3 Recommended Operating Conditions

over operating junction temperature range (unless otherwise noted).

		MIN	NOM	MAX	UNIT
V _{DD}	Supply voltage	1.1		5.5	V
V _I	Input voltage	0		V _{DD} + 0.3	V
V _{IH}	High-level input voltage at $\overline{\text{MR}}$ and WDI	0.7 × V _{DD}			V
V _{IL}	Low-level input voltage			0.3 × V _{DD}	V
Δt/ΔV	Input transition rise and fall rate at $\overline{\text{MR}}$ or WDI			100	ns/V
T _A	Operating free-air temperature range	-40		125	°C

7.4 Thermal Information

8 Detailed Description

8.1 Overview

The TPS382x-xx-Q1 family of supervisors provide circuit initialization and timing supervision. Optional configurations include devices with active-high and active-low output signals (TPS3824/5-xx-Q1), devices with a watchdog timer (TPS3820/3/4/8-xx-Q1), and devices with manual reset ($\overline{\text{MR}}$) pins (TPS3820/3/5/8-xx-Q1). $\overline{\text{RESET}}$ asserts when the supply voltage, V_{DD} , rises above 1.1 V. For devices with active-low output logic, the device monitors V_{DD} and keeps $\overline{\text{RESET}}$ low as long as V_{DD} remains below the negative threshold voltage, $V_{\text{IT-}}$. For devices with active-high output logic, $\overline{\text{RESET}}$ remains high as long as V_{DD} remains below $V_{\text{IT-}}$. An internal timer delays the return of the output to the inactive state (high) to ensure proper system reset. The delay time, t_d , starts after V_{DD} rises above the positive threshold voltage ($V_{\text{IT-}} + V_{\text{HYS}}$). When the supply voltage drops below $V_{\text{IT-}}$, the output becomes active (low) again. All the devices of this family have a fixed-sense threshold voltage, $V_{\text{IT-}}$, set by an internal voltage divider, so no external components are required.

The TPS382x-xx-Q1 family is designed to monitor supply voltages of 2.5 V, 3 V, 3.3 V, and 5 V. The devices are available in a 5-pin SOT-23 package and are characterized for operation over a temperature range of -40°C to 125°C , and are qualified in accordance with AEC-Q100 stress test qualification for integrated circuits.

8.2 Functional Block Diagram

- (1) TPS3824/5-xx-Q1
- (2) TPS3820/3/5/8-xx-Q1
- (3) TPS3820/3/4/8-xx-Q1

8.3 Feature Description

8.3.1 Manual Reset ($\overline{\text{MR}}$)

The $\overline{\text{MR}}$ input allows an external logic signal from processors, logic circuits, and/or discrete sensors to force a reset signal regardless of V_{DD} with respect to $V_{\text{IT-}}$ or the state of the watchdog timer. A low level at $\overline{\text{MR}}$ causes the reset signals to become active.

8.3.2 Active High or Active Low Output

All TPS382x-xx-Q1 devices have an active-low logic output ($\overline{\text{RESET}}$), while the TPS3824/5-xx-Q1 devices also include an active-high logic output (RESET).

Feature Description (continued)

8.3.3 Push-Pull or Open-Drain Output

All TPS382x-xx-Q1 devices, except for TPS3828-xx-Q1, have push-pull outputs. TPS3828-xx-Q1 devices have an open-drain output.

8.3.4 Watchdog Timer (WDI)

TPS3820/3/4/8-xx-Q1 devices have a watchdog timer that must be periodically triggered by either a positive or negative transition at WDI to avoid a reset signal being issued. When the supervising system fails to retrigger the watchdog circuit within the time-out interval, t_{out} , \overline{RESET} becomes active for the time period t_d . This event also reinitializes the watchdog timer.

The watchdog timer can be disabled by disconnecting the WDI pin from the system. If the WDI pin detects that it is in a high-impedance state the TPS3820/3/4/8-xx-Q1 will generate its own WDI pulse to ensure that \overline{RESET} does not assert. If this behavior is not desired place a 1-k Ω resistor from WDI to ground. This resistor will help ensure that the TPS3820/3/4/8-xx-Q1 detects that WDI is not in a high-impedance state.

In applications where the input to the WDI pin is active (transitioning high and low) when the TPS3820/3/4/8-xx-Q1 is asserting \overline{RESET} , \overline{RESET} will be stuck at a logic low after the input voltage returns above V_{IT-} . If the application requires that input to WDI be active when the reset signal is asserted, then use a FET to decouple the WDI signal. An external FET decouples the WDI signal by disconnecting the WDI input when \overline{RESET} is asserted. For more details on this, see [Decoupling WDI During Reset Event](#) for more details.

8.4 Device Functional Modes

The device functions according to the inputs and outputs in [Table 1](#).

Table 1. Function Table

INPUTS		OUTPUTS	
\overline{MR} (1)	$V_{DD} > V_{IT}$	\overline{RESET}	$RESET^{(2)}$
L	0	L	H
L	1	L	H
H	0	L	H
H	1	H	L

(1) TPS3820/3/5/8-xx-Q1

(2) TPS3824/5-xx-Q1

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The TPS382x-xx-Q1 family of devices are very small supervisory circuits that monitor fixed supply voltages of 2.5 V, 3 V, 3.3 V, and 5 V. The TPS382x-xx-Q1 family operates from 1.1 V to 5.5 V. Orderable options include versions with either push-pull or open-drain outputs, versions that use active-high or active-low logic for output signals, versions with a manual reset pin, and versions with a watchdog timer. See the [Device Comparison Table](#) for an overview of device options.

9.2 Typical Applications

9.2.1 Supply Rail Monitoring with Watchdog Time-out and 200-ms Delay

The TPS3823-xx-Q1 can be used to monitor the supply rail for devices such as microcontrollers. The downstream device is enabled by the TPS3823-xx-Q1 once the voltage on the supply pin (V_{DD}) is above the internal threshold voltage ($V_{IT+} + V_{HYS}$). The downstream device is disabled by the TPS3823-xx-Q1 when V_{DD} falls below the threshold voltage minus the hysteresis voltage (V_{IT-}). The TPS3823-xx-Q1 also issues a reset signal if the WDI input is not periodically triggered by a positive or negative transition at WDI. When the supervising system fails to retrigger the watchdog circuit within the time-out interval, t_{out} , \overline{RESET} becomes active for the time period t_d .

Some applications require a shorter reset signal than the 200 ms that most of the TPS382x-xx-Q1 family provide. In these cases, the TPS3820-xx-Q1 is a good choice because it has a delay time of only 25 ms. If an open-drain output is needed, replace the TPS3823-xx-Q1 with the TPS3828-xx-Q1 (if the WDI input must be active while \overline{RESET} is low, see [Decoupling WDI During Reset Event](#)). [Figure 9](#) shows the TPS3823-33-Q1 in a typical application.

Figure 9. Supply Rail Monitoring With Watchdog Time-out

9.2.1.1 Design Requirements

The TPS3823-33-Q1 must drive the enable pin of a MSP430C325 using a logic-high signal to signify that the supply voltage is above the minimum operating voltage of the device and monitor the I/O pin to determine if the microcontroller is operating correctly.

Typical Applications (continued)

9.2.1.2 Detailed Design Procedure

Determine which version of the TPS382x-xx-Q1 family best suits the functional performance required.

If the input supply is noisy, include an input capacitor to help avoid unwanted changes to the reset signal.

9.2.1.3 Application Curve

Figure 10. Minimum Pulse Duration at V_{DD} vs V_{DD} Threshold Overdrive

9.2.2 Decoupling WDI During Reset Event

If the application requires that the input to WDI is active when the reset signal is asserted, Figure 11 shows how to decouple WDI from the active signal using an N-channel FET. The N-channel FET is placed in series with the WDI pin, with the gate of the FET connected to the RESET output.

Figure 11. WDI Example

10 Power Supply Recommendations

These devices are designed to operate from an input supply with a voltage range from 1.1 V to 5.5 V. Though not required, it is good analog design practice to place a 0.1-μF ceramic capacitor close to the V_{DD} pin if the input supply is noisy.

11 Layout

11.1 Layout Guidelines

Follow these guidelines to lay out the printed-circuit-board (PCB) that is used for the TPS382x-xx-Q1 family of devices.

- Place the V_{DD} decoupling capacitor (C_{VDD}) close to the device.
- Avoid using long traces for the V_{DD} supply node. The V_{DD} capacitor (C_{VDD}), along with parasitic inductance from the supply to the capacitor, can form an LC tank and create ringing with peak voltages above the maximum V_{DD} voltage.

11.2 Layout Example

12.3 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At [e2e.ti.com](#), you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

12.4 Trademarks

E2E is a trademark of Texas Instruments.
 All other trademarks are the property of their respective owners.

12.5 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.6 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DBV (R-PDSO-G5)

PLASTIC SMALL-OUTLINE PACKAGE

4073253-4/N 12/14

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
 - D. Falls within JEDEC MO-178 Variation AA.

DBV (R-PDSO-G5)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
 - D. Publication IPC-7351 is recommended for alternate designs.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
